

ELECTRONIC DOOR CHIME

The Electronic Door Chime (HON-INN-CHM) is a member of Inncom's Integrated Room Automation System (IRAS). It works in concert with Inncom's System 5 guestroom controls. The HON-INN-CHM functions as a doorbell, announcing visitors to the guestroom when the doorbell button on an external doorplate is pressed.

Electronic Door Chime (HON-INN-CHM)

The Electronic Door Chime (HON-INN-CHM) works with Inncom doorplate switches HON-INN-RN and custom designer series. It may also be retrofitted to work with a preexisting doorbell device.

APPLICATION

The Electronic Door Chime will sound only once when the doorbell is pressed. The sound level of the chime is set at a volume that prevents guests in adjacent rooms from hearing it. The chime can be disabled by the "Privacy" feature on an internal Inncom switches.

OPERATION

The CHM is mounted in the entry area of the guestroom and connects directly to the controller through low voltage cable. The recommended mounting area is in a closet or in the return air duct of the air conditioning system or other area where it can be heard in the room.

FEATURES AND HIGHLIGHTS

- Enhances guest privacy and satisfaction
- Adjustable volume level
- Mechanical mounting ready
- Wall mountable/Double sided tape
